

Naveen Kumar

📍 7319831666 ✉ nk9411123@gmail.com in Naveen Kumar 🗣 Ojhanaveen 📍 Navi Mumbai, Maharashtra

Profile Summary

- Software Engineer with hands-on experience in building and supporting scalable web applications using React.js, Node.js and Python
- Strong experience in REST API integration, API testing using Postman, and troubleshooting production issues through debugging and log analysis
- Experienced in working with backend systems and ITSM workflows to resolve issues, automate processes, and ensure smooth system operations
- Skilled in diagnosing and resolving user-facing issues by analyzing API responses, logs, and system behavior
- Strong problem-solving mindset with the ability to bridge technical systems and user-facing challenges

Technologies

Languages: JavaScript, Python

Frameworks & Libraries: React.js, Node.js, Express.js, Tailwind CSS, Bootstrap, pytorch

Backend: REST APIs, Postman (API Testing), ITSM Workflows

Debugging: Log Analysis, Error Handling, Issue Troubleshooting

Authentication: JWT (Bearer Token), API Key, Basic Auth

Tools: Git, GitHub, VS Code, Vercel

Experience

Software Engineer

Chennai, India

Cap Corporate AI Solution

Mar 2026 - Present

- Contributing to the development of PolicyAI, focusing on building and supporting backend-driven workflows
- Integrated and tested REST APIs using Postman to validate request/response flows and ensure reliable system communication
- Diagnosed and resolved production issues through debugging and log analysis, improving system stability
- Worked on ITSM-based workflows to manage ticket creation, issue tracking, and incident resolution
- Assisted in resolving user-facing issues by identifying root causes in APIs and backend processes

Frontend Developer Intern

Chennai, India

Cap Corporate AI Solution

Sep 2025 - Feb 2026

- Developed and optimized responsive UI components for BallotDA using modern JavaScript practices, ensuring smooth user interactions
- Integrated frontend components with backend services to enable real-time data rendering and dynamic features
- Assisted in testing API responses using Postman and validating data flows to ensure correct system behavior
- Worked with authenticated endpoints and debugged UI and API-related issues to improve reliability and user experience

AI Language Trainer

San Francisco, USA

Outlier

Sept 2024 - Feb 2025

- Improved large language model performance using prompt engineering and test case design, increasing response accuracy by 40%
- Coordinated with cross-functional teams across multiple tasks, improving delivery efficiency by 40%

Projects

Finma Finance

[Link](#) 

- Engineered a high-performance, role-based financial management platform using **React.js**, enabling secure workflows across dashboards, transaction systems, and analytics modules
- Designed and validated robust RESTful integrations using **Postman**, ensuring seamless data exchange, endpoint reliability, and consistent API contract enforcement
- Implemented enterprise-grade authentication using **JWT** with role-based access control (RBAC), enforcing granular permissions across Viewer, Analyst, and Admin roles
- Strengthened application resilience by handling API failures, edge cases, and enforcing structured error handling across frontend and backend layers
- Improved system stability through proactive API validation, log analysis, and debugging, ensuring high data integrity and reliable financial operations

Expense Tracker

[Link](#) 

- Architected a premium financial dashboard using **React (Vite)** and **Tailwind CSS**, delivering a high-performance, glassmorphic UI with fluid animations and responsive design
- Engineered secure authentication using **JWT with HttpOnly cookies**, mitigating XSS risks and enforcing strict session control with SameSite and Secure policies
- Implemented robust backend security controls including **rate limiting**, IDOR protection, and request-level user binding to safeguard sensitive financial operations
- Designed real-time financial insights using **MongoDB Aggregation Pipelines**, enabling sub-20ms analytics for categorized expense tracking and dashboard summaries
- Built and deployed a scalable full-stack architecture using **Node.js, Express, MongoDB Atlas, Vercel, and Render**, ensuring seamless CI/CD and high availability
- Enhanced user experience with **Framer Motion** micro-interactions and optimized UI performance, improving engagement and interface responsiveness

Quiz App

[Link](#) 

- Developed an interactive quiz web application using HTML, CSS, and JavaScript with dynamic question rendering.
- Utilized the Document Object Model (DOM) to manipulate and update quiz content in real-time based on user interaction.
- Implemented responsive layout designs using CSS Flexbox and Grid for seamless performance across all screen sizes.
- Ensured smooth user experience through input validation, score tracking.

Achievements

- Served as College Head for one year, leading and organizing multiple high-impact events
- Contributed to CPHD Healthcare Foundation (NGO) for one year, supporting community initiatives

Education

Sagar Institute of Research and Technology Excellence, Bhopal, MP

Graduated: June 2025

Bachelor's of Technology in Computer Science

- GPA: 7.56 (8th Semester)
